

**Coa Solutions** — a veteran-owned, AI-first firm delivering applied AI for federal missions and healthcare. Arlington, Virginia · Delaware LLC · founded 2022.

## THE DELIVERY MODEL

A working AI system in **weeks** — designed through your eyes, and **tracked** to prove it **actually helps**.

See it work before you fund it.

[AI Pilots Walking Deck \(PDF\)](#) ➔

## AI CAPABILITIES

What we build, govern, and run

01

### AI Pilots

A real, working AI product in weeks — on your data and your rules.

[ai-pilots](#) ➔

02

### AI Governance

Guardrails enforced in code and configuration, mapped to NIST AI RMF and the OWASP LLM Top-10.

[ai-principles](#) ➔

03

### Analytics & Reporting

Dashboards that track accuracy, grounding, human-acceptance, and model drift.

04

### Model Selection & Economics

Model bake-offs on your data — the right model chosen on quality and cost per case.

05

### Integration

AI wired into the systems and workflows your team already runs on.

06

### OCR & Document Analysis

Extraction and structured analysis across mixed-format federal records.

## WHY COA

# Key differentiators.

What separates an AI pilot that ships from one that stalls.

## AI that actually solves the problem

A working system on your real workflow that earns its place — not an impressive demo on someone else's data. [ai-pilots](#) ↗

## Governance enforced in code, not prompts

The rules the AI works within live in code and configuration — not prompt text — and hold identically across every deployment. [ai-principles](#) ↗

## Forward-based engineering

AI accelerates the build while our engineers own the system: automated quality gates catch regressions, fixes ship continuously, and the running system is monitored.

## Designed through your eyes

Built around the person doing the work, so the AI fits the job instead of forcing a new one on them.

## Accuracy you can see

Golden evaluation sets, grounding and citation checks, human-acceptance rates, and drift monitoring — measured on a dashboard, not asserted.

## Traceable to the standards

Every control maps to NIST AI RMF, the OWASP Top-10 for LLM Applications, and current federal AI guidance — so an evaluator can trace it back.

## SELECTED PAST PERFORMANCE

**Adjudicate** — Next-generation case management & decision writing · 100,000+ appeals at the Board of Veterans' Appeals (BVA).

**Cross-Benefit** — VA.gov authenticated benefits delivery.

**Veterans Appeals Platform** — An 8-year production case-management system.

**NCA AI Pilot** — AI for the National Cemetery Administration contact center, with the VA Chief AI Officer.

**Organ Donation** — Decision support for a transplant network.

**IRS Identity** — Enterprise identity & access (US Certs).
